

PERFORMANCE MARKETING, OWNED

# WINNING KART

The self-hosted performance-marketing platform for agencies

*Your data. Your roof. Your rules.*

Platform-agnostic

Any store, any stack

MCP + agent ready

Client portal included

# Running an agency on rented tools costs you control

## Your data lives in their cloud

Every insight, token and history sits on vendor servers. Leave, and the archive stays behind.

## Pricing that punishes growth

\$20 per client, €699 floors, spend-based tiers. Your roster doubles — so does the bill.

## Black-box attribution

When a client asks how ROAS was computed, the honest answer is: the vendor will not say.

## Five tools, zero flow

Reporting here, automation there, creative analysis elsewhere — stitched by exports and hope.

## Portals clients ignore

A generic dashboard with a login. Clients nod politely, then ask: so is it working?

## No path to automation

Agencies increasingly run on agents and APIs. Most incumbent tools offer neither.

# The pricing wall, at a 15-client roster

**\$20**

per month, total platform cost — a small VPS you already know how to run

- Unlimited clients, ad accounts and users
- No per-seat, per-client or spend meter
- One flat line item — forever

Winning Kart (self-hosted)

List pricing verified Aug 2026 · Northbeam entry from \$1,500/mo · Self-hosted cost = one small VPS

# One operator-owned platform for the whole book

## Portfolio pulse

Every client, every account — one 15-second morning read.

## Every platform, one dashboard

Meta, Google, TikTok, Snapchat and LinkedIn connect through one adapter seam — your book reads the same whichever mix you run.

## Revenue from any stack

Shopify, WooCommerce or your custom API — ingested from day one.

## A portal clients trust

Plain-English results, fully read-only, zero internals leaked.

## Secrets done right

Tokens AES-256-GCM encrypted; your Postgres, your VPS, your keys.

### WINNING KART — OVERVIEW

Portfolio health · all clients

# Built around how agencies actually work

EVERY SURFACE DRILLS THIS CHAIN · EVERY ROLE SEES ITS SLICE

## Team & 7-role RBAC

Owner to client viewer — scoped at the query layer

## Reports & client portal

Curated output, never a data dump

## Signals: alerts & tasks

Detection hangs off the chain and links back to it

**Revenue is not a node.** It arrives from the client's store or CRM and is attributed back onto this chain with match-quality tiers — nothing duplicated, everything drillable.

# Start every morning with the 15-second read

## Insights ranked by money at risk

Token failures and ROAS drops sort themselves to the top of one list.

## Account health strip

Token expiry, sync failures, restrictions — operational trust at a glance.

## Signal to campaign in one click

Every insight carries you straight to the offending entity, filters intact.

### EVERY SCREEN CLIMBS THIS LADDER

Overview and Alerts always reach ACTION.

### ACTIONABLE INSIGHTS — TOP 3 OF 7

● CRITICAL

Maison Nour ROAS fell 28% (4.1x → 3.0x); AED 3,400 at risk.

# Find winners and losers before the invoice does

## Campaigns ledger

Decision metrics first, winner and loser rows tinted, spend share visible. Drill from account to creative in three hops — every lens deep-linkable.

*Three hops, not thirty clicks*

## Ad set comparison

Up to four ad sets side-by-side against a baseline, cost metrics inverted, and honest guardrails when objectives do not compare.

*Split-test reads in seconds*

## Creative intelligence

A gallery that flags fatigue — frequency, CTR decay, spend concentration — and concentration risk before a single ad carries the whole account.

*Refresh briefs backed by evidence*

Compare up to 4 ad sets

Fatigue rules built in

Concentration flagged at 50% of spend

# Signals only matter when they become work

*Anti-noise is the product: signals that survive are the ones you act on.*

Deduped per entity

Suppressed while a task is open

Ranked by spend at risk

Honest: unattributed below 60% cause

## EIGHT RULES, ALWAYS ON

ROAS drop

CPA spike

Zero-conversion spend

Creative fatigue

Purchase concentration

Token expiring

Token expired

Account restricted

# Close the loop between spend and real money

Revenue ingests from any stack — Shopify, WooCommerce or a custom API — from day one. Then every dirham is matched with its quality shown, never hidden.

## ● Tier A — Deterministic

A click-id is present. The order ties to a specific ad. Highest trust.

## ● Tier B — Probabilistic

UTM parameters resolve the order to a campaign group.

## ● Tier C — Unmatched

No signal. Recorded and shown honestly — never fabricated.

**Every number carries its model and its limits.** A Limitations tab ships first-class — you can defend any figure to a CFO.

WHERE CREDIT LANDS — ILLUSTRATIVE

# Reports clients read in ten seconds

## Plain-English KPIs

"You earned AED 3.32 for every AED 1 spent" — no jargon to translate, no spin to unspin.

## Zero internals leaked

No pacing, no token status, no cost diagnostics. Outcomes only — the back office stays backstage.

## Scoped by role

Seven roles. Client logins see their book and nothing else — enforced at the query layer.

## Scheduled, branded reports

V1 brings white-label PDFs that land in the portal automatically. The artifact that leaves the building.

*Churn drops when clients understand their numbers.*

PURCHASES

**847**

*You earned AED 3.32 for every AED 1 spent*

Spend vs revenue · last 30 days

# Fatigue detection pays for itself in week one

A real pattern the platform catches: frequency 5.2, CTR down 27% week-over-week, AED 715 a day of cohort spend on one dying creative.

**AED 4,290**

saved per incident when detection runs hourly instead of weekly

- Sync runs hourly; reviews run weekly
- One saved incident pays for a year of VPS

Illustrative — computed from the platform's own detection rules and thresholds.

# Give the team their month back

## 29 h

back per month on a 10-client book — analysis, reporting and client check-ins included

- That is five strategy sessions, or five pitches
- Morning check: 45 minutes becomes five
- Onboard a new client in minutes, not days
- Client questions answered from the portal, not your inbox

*Illustrative — 10-client roster; routine analysis, reporting and check-ins.*

# Your data. Your roof. Your rules.

## Any VPS you like

Hostinger, AWS EC2, DigitalOcean — Coolify and Traefik deploy in an afternoon, SSL included.

## Secrets done right

Platform tokens encrypted with AES-256-GCM. Master keys never leave your environment.

## Residency on your terms

UAE PDPL and GDPR aligned by default — data lives wherever your box lives.

## Full export, anytime

Every table, one JSON download. Walk away any day with everything in hand.

## Append-only audit log

Every login, token and write — recorded, filterable, exportable. Trust you can show.

*No telemetry. No vendor lock-in. No quarterly price letter.*

# Built for the agent era

## MCP + REST, token-gated

Your automations and AI agents log in like team members — scoped, revocable, audited.

## Seven tools today

Read the book, pull campaigns and alerts, create tasks, trigger syncs — more every release.

## Automations that act

Point n8n or a custom agent at weekly recaps, budget checks and creative-refresh prompts.
